

JCB KIDS BUILD YOUR OWN HYDRADIG

INSTRUCTIONS

- 1 Print this model onto heavy paper
- 2 Carefully cut out all parts using scissors or hobby knife
- 3 Score and crease all fold lines, and prefold everything. Doing this step accurately will result in a much nicer finished model. All folds are "mountain" folds unless otherwise indicated.
- 4 Use common adhesive glue for paper. Glue on the areas marked with black dots. Test-fit each part before applying glue to make sure you understand how it goes together. Attach with pressure, taking time to let the glue cure.
- 5 For a better appearance, color the back of the smaller parts with a black ink marker.
